

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Circuit Court - 5 Year Trend\***

Notes:

- Traffic data is not included in calculations.
- Fiscal years 2008-09 to 2011-12 were extracted from a static data base and represent the official trial court statistics. Fiscal year 2012-13 and quarterly data for Oct-Dec 2012, Jan-Mar 2013, Apr-Jun 2013, and Jul-Sep 2013 were extracted from a dynamic data base and may be amended by the Clerk of Court.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

In addition, County Court does not include Wakulla County county criminal (September 2013).

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Circuit Court - 5 Year Trend\***

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Notes:

1. Traffic data is not included in calculations.
2. Fiscal years 2008-09 to 2011-12 were extracted from a static data base and represent the official trial court statistics. Fiscal year 2012-13 and quarterly data for Oct-Dec 2012, Jan-Mar 2013, Apr-Jun 2013, and Jul-Sep 2013 were extracted from a dynamic data base and may be amended by the Clerk of Court.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

## Notes:

- Traffic data is not included in calculations.
- Fiscal years 2008-09 to 2011-12 were extracted from a static data base and represent the official trial court statistics. Fiscal year 2012-13 and quarterly data for Oct-Dec 2012, Jan-Mar 2013, Apr-Jun 2013, and Jul-Sep 2013 were extracted from a dynamic data base and may be amended by the Clerk of Court.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Notes:

- Traffic data is not included in calculations.
- Fiscal years 2008-09 to 2011-12 were extracted from a static data base and represent the official trial court statistics. Fiscal year 2012-13 and quarterly data for Oct-Dec 2012, Jan-Mar 2013, Apr-Jun 2013, and Jul-Sep 2013 were extracted from a dynamic data base and may be amended by the Clerk of Court.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

**Clearance Rate -**

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.
