

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.

2. Fiscal years 2009-10 to 2013-14 and quarterly data for Oct-Dec 2013, Jan-Mar 2014, and Apr-Jun 2014 were extracted from a static data base and represent the official trial court statistics. Quarterly data for Jul-Sep 2014 were extracted from a dynamic data base and may be amended by the Clerk of Court. In addition, County Court does not include St. Lucie County county criminal (July 2014 to September 2014).

Clearance Rate -

The clearance rate is an indicator of whether a court is "keeping up" with its incoming caseload. The rate is determined by dividing the total number of cases *disposed* by the total number of cases *filed* during a specific time period. For example, if a court received 1,000 new cases a month and disposed of 900 cases during the same month, the clearance rate for that month is 90 percent. If a court's clearance rate is continually less than 100 percent over an extended period of time, the court will develop a backlog.

Clearance rates statistically tend to be more volatile when measured over shorter time periods. They should be compared over a period of five or more years to identify trends. There are many factors that can affect a court's clearance rate, including the number of filings, judicial assignment practices, case management resources and practices, trial rates, and reporting errors. Court managers may want to investigate these factors to identify the source(s) of a questionable clearance rate point or trend.
